

***hamburg-wave* Jupiter-4 MIDI Patch Pack by synthdude.se**

Thanks for downloading this patch compilation for your *hamburg-wave* Jupiter-4 MIDI kit. It consists of 16 brand-new patches, all exclusively created by synthdude.se.

You will find two different SysEx files in this archive. Both hold essentially the same patches, but they will be uploaded to different ranges of your JP4's memory location.

Changes will only be written to the specific memory positions. All other positions will be preserved without any changes.

I: HW_JP4patches_synthdude_1-24.syx

- Patch 1-8: patch bank A
- Patch 9-16 (BASS + 1-8): patch bank A
- Patch 17-24 (STRINGS + 1-8): patch bank B

Have some great patches to start with and to tweak or overwrite on your memory positions 1-8. Find the same first 8 patches again to keep or tweak on positions 9-16 (BASS + 1-8), plus 8 more on the 17-24 bank (STRINGS + 1-8).

Your new HW midi kit will come with this layout preinstalled.

II: HW_JP4patches_synthdude_65-80.syx

- Patch 65-72 (TRUMPET + 1-8): patch bank A
- Patch 73-80 (SYNTH + 1-8): patch bank B

You have already started to create your own patches? Awesome! Here's a patch layout that will leave your own custom patches on the first banks untouched, and place these new ones on the last two complete banks 65-72 (TRUMPET + 1-8) and 73-80 (SYNTH + 1-8).

The Patches

Type	Patch Name	Memory Pos. (I)	Memory Pos. (II)
Pad	Beetle	1, BASS + 1	TRUMPET + 1
Lead	Camaro	2, BASS + 2	TRUMPET + 2
Lead	Countach	3, BASS + 3	TRUMPET + 3
Pluck	M1	4, BASS + 4	TRUMPET + 4
Pad	RS200	5, BASS + 5	TRUMPET + 5
Lead	Delorean	6, BASS + 6	TRUMPET + 6
Pad	Skyline	7, BASS + 7	TRUMPET + 7
Lead	NSX	8, BASS + 8	TRUMPET + 8
Pad	Carrera	STRINGS + 1	SYNTH + 1
Bass	Mustang	STRINGS + 2	SYNTH + 2
Bass Drum	Jalpa	STRINGS + 3	SYNTH + 3
FX	Esprit	STRINGS + 4	SYNTH + 4
Pluck	Supra	STRINGS + 5	SYNTH + 5
Pad	Corvette	STRINGS + 6	SYNTH + 6
FX	Quattro	STRINGS + 7	SYNTH + 7
FX	E-Type	STRINGS + 8	SYNTH + 8

Installation

These patches come as regular SysEx files, so there are many ways to import them in your synthesizer. Here are some suggestions for possible ways to get started:

- Use [MIDI/OX](#) on your Windows PC
- Use [Snoize SysEx Librarian](#) on your Mac
- Most DAW software suites (Cubase, Logic, ...) also import SysEx files and output them

Many thanks to synthdude.se for this awesome contribution!

Have a lot of fun with these great sounds!

Torsten at *hamburg-wave*
